duet pipeline v1.4.1

We have issued the following bug fix and feature improvement in the current release:

Resource Utilisation

- **Reduced log file size in Quantification Process**
 - In the previous version of duet (v1.4.0), we discovered that the quantification process (epiquant) produced excessively large log files. This had the potential to impact workflows by consuming excess storage and slowing down the pipeline. We have now resolved this issue with an important hotfix in duet v1.4.1.
 - This update significantly reduces log file size, ensuring a smoother experience with no impact on existing workflows.
